

Amendments to the Claims:

The listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently Amended) Seat console, for a vehicle seat held on the vehicle floor, which is connected with a seat rail in which the vehicle seat is slidably disposed,

~~wherein~~ the seat console ~~comprises~~ comprising a stationary bottom frame with a floatingly disposed top frame ~~while~~ with weight sensors ~~are~~ connected ~~in-between~~ therebetween, the weight sensors being stationarily connected by way of connection elements, ~~in a stationary manner~~ with the top frame ~~on the one hand~~, and being fastened to the bottom frame by way of a bolt integrated in the respective sensors ~~on the other hand~~, wherein the top frame and the bottom frame each have a U-profile-shaped cross-section and legs, the top frame reaching by the legs thereof in a floating manner over the legs of the bottom frame, the legs of the top frame dipping into the bottom frame and the weight sensors each being surrounded by the legs of the top frame and bottom frame, the weight sensors being arranged such that the frames each have a sensor and other of the weight sensors are arranged in a transition area of the legs to a transverse web of the frames, and spacer blocks are arranged between the sensors and the top frame to form a parallel arrangement of the top and bottom frames.

2 – 8 (Cancelled)

9. (Currently Amended) Seat console according to Claim ~~3~~ 1, wherein the sensors arranged in the legs ~~can~~ configured to be screwed to the top frame by ~~way of~~ two threaded bolts and respectively in the threaded plate constructed as a connection element on the top side of the top frame.

10. (Cancelled)

11. (Currently Amended) Seat console according to Claim ~~4~~ 1, wherein the sensors arranged in the transition area and respectively can be fastened by means of threaded bolts in nuts stationarily held in the top frame or the threaded plate.

12. (Cancelled)

13. (Currently Amended) Seat console according to Claim ~~2~~ 1, wherein the legs of the top frame and the bottom frame are closed off at their free ends by way of a cap.

14. – 15 (Cancelled)

16. (Original) Seat console according to Claim 1, wherein the bottom frame and the top frame are comprised of a U-shape, and free ends of legs of the U-shape frames are each connected by way of a transverse web.

17. – 19 (Cancelled)

20. (Currently Amended) A passenger vehicle seat console assembly for supporting a vehicle seat rail which in use slidably supports a vehicle seat, said console assembly comprising:

a bottom frame;

a top frame; and

a plurality of weight sensors disposed between the top and bottom frames,

wherein the respective weight sensors are connected in a stationary manner with the top frame and are fastened to the bottom frame by respective bolts integrated in the respective weight sensors, the top frame and the bottom frame each have a U-profile-shaped cross-section and legs, the top frame reaching by the legs thereof in a floating manner over the legs of the bottom frame, the legs of the top frame dipping into the bottom frame and the weight sensors each being surrounded by the legs of the top frame and bottom frame, the weight sensor being arranged such that the frames each have a sensor and other of the weight sensors are arranged in a transition area of the legs to a transverse web of the frames, and spacer blocks are arranged between the sensors and the top frame to form a parallel arrangement of the top frame with respect to the bottom frame.

21. – 24 (Cancelled)
